                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Schutte B.C., Mitros J.P., Bartlett J.A., Walters J.D., Jia H.P., Welsh M.J., Casavant T.L., McCray P.B. Jr.;

"Discovery of five conserved beta-defensin gene clusters using a computational search strategy.";

Proc. Natl. Acad. Sci. U.S.A. 99:2129-2133(2002).

-i - FUNCTION: Has antibacterial activity (Potential).

-i - SUBCELLULAR LOCATION: Secreted (Potential).

-i - SIMILARITY: Belongs to the beta-defensin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-NOV-1997 (Rel. 35, Created)

-!- CATALYTIC ACTIVITY: ATP + dephospho-CoA = ADP + CoA.
-!- PATHWAY: Coenzyme A to blosynthesis; fifth (last) step.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the coaE family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

-!- FUNCTION: Essential for recycling GMP and indirectly, cGMP.
-!- CATALYTICA ACTIVITY: ATP + GMP = ADP + GDP.
-!- SUBCELLUTAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the guanylate kinase family.

-!- FUNCTION: Essential for recycling GMP and indirectly, cGMP.
-!- CATALYTIC ACTIVITY. ATP + GMP = ADP + GDP.
-!- SUBCELIULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the guanylate kinase family.
Neisseria meningitidis (serogroup B).
Bacteria; Proteobacteria; Betaproteobacteria; Neisseriales;
Neisseriaceae; Neisseria.

J. Biol. Chem. 272:5995-6003(1997).
-!- FUNCTION: Component of the circadian clock or downstream effector
-!- FUNCTION: Component of the circadian clock or clock function. Exhibits a high amplitude circadian rhythm with
maximal levels in early evening. In constant darkness or constant
light, the amplitude of the rhythm decreases (By similarity).
-!- SIMILARITY: Belongs to the CCR4/nocturin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Puech A., Dupressoir A., Loireau M.P., Mattei M.-G., Heidmann T., "Characterization of two age-induced intracisternal A-particle-related transcripts in the mouse liver. Transcriptional read-through into an open reading frame with similarities to the yeast cor4 transcription

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Wang Y., Osterbur D.L., Green C.B., Besharse J.C.;
"Mammalian homologs of Xenopus nocturnin: conservation of structure and circadian regulation.";
Submitted (OCT-1991) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Component of the circadian clock or downstream effector of clock function. Exhibits a high amplitude circadian rhythm with maximal levels in early evening. In constant darkness or constant light, the amplitude of the rhythm decreases (By similarity).
-!- SIMILARITY: Belongs to the CCR4/nocturin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Dupressoir A., Barbot W., Loireau M.P., Heidmann T.; financiarion of a mammalian gene related to the yeast CCR4 general transcription factor and revealed by transposon insertion."; biol.     -!- SIMILARITY: Belongs to the herpesviruses glycoprotein D family.
    -!- CAUTION: It is uncertain whether Met-1 or Met-51 is the initiator.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

--- CTALLYITA ACTIVITY: Release of an N-terminal amino acid, Xaa-|--
Xbb-, in which Xaa is preferably Leu, but may be other amino acids
including Pro although not Arg or Lys, and Xbb may be Pro.
--- CORACTON: Binds 2 manganese ions per subunit (By similarity).
---- STARLIALAR LOCATION: Cytoplasmic (By similarity).
---- SIMILARITY: Belongs to peptidase family MIT.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein - Synechocystis sp. (strain PCC 6803)

```
hypothetical protein slr1169 - Synechocystis sp. (strain PCC 6803)

(c) Species: Synechocystis sp.

4) Variety: PCC 6803

(c) Auriety: Synechocystis sp.

(c) Auriety: Synechocystis sp.

(c) Auriety: Sato, S.; Kotani, H.; Tanaka, A.; Asamizu, E.; Nakamura, Y.; Miyajima, N.; Kanako, T.; Sato, S.; Shimpo, S.; Takeuchi, C.; Wada, T.; Watanabe, A.; Yamada, M.; Yasu DNA Res. 3, 109-136, 1996

A;Title: Sequence analysis of the genome of the unicellular cyanobacterium Synechocyst
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A,Accession: S75883

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ద
                                                                                ionicropic glutamate receptor homolog GLR4 [imported] - Arabidopsis thaliana (%) C.Species: Arabidopsis thaliana (mouse-ear cress)
C.Species: Arabidopsis thaliana (mouse-ear cress)
C.Species: 28-Jul-2000 #sequence_revision 28-Jul-2000 #text_change 28-Jul-2000
C.Accession: T51137
R.Pavenport, R.J., Kiegle, E.A.; Testen, M. submitted to the EMBL Data Library, September 1999
A.Pescription: Cloning of an ionotropic glutamate receptor homolog from Arabidopsis thal A.Reference number: Z25310
A.Accession: T51137
A.Accession: T51137
A.Molecule type: mRNA
A.Molecule type: mRNA
A.Molecule type: EMBL:AF183932; PIDN:AAF01294.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  potassium transport protein TRK1, high-affinity - yeast (Saccharomyces cerevisiae)
N;Alternate names: protein J0693; protein YJ1129c
Species: Saccharomyces cerevisiae
C;Date: 31-Mar-1991 #sequence_revisiae
C;Accession: S05849; S56910
R;Gaber, R.P.; Styles, C.A.; Pink, G.R.
